

For the 4 ingredients of EPH 20 (and EPH 0)

All ingredients can be found (or made yourself). This is the only noncorrosive primer recipe that I (we) know of. That is where ALL of the ingredients are obtainable by the average American.

Ingredient #1 : Lead nitrate (This should be a no-brainer). It's on Amazon.

https://www.amazon.com/HiMedia-GRM724-500G-Lead-Nitrate-Purified/dp/B00DYOCNQ8/ref=sr_1_4?dchild=1&keywords=lead+nitrate+himedia&qid=1610283545&sr=8-4

You make #2 from a chemical called Sodium hypophosphite People tell me they have found it on Ebay in various quantities from Bulgaria (of all places)

Ingredient #2. Lead hypophosphite.

You will need to perform some wet chemistry and purchase roughly \$100 worth of chemistry equipment (beakers, hot plates, etc).

<https://www.ebay.com/itm/Sodium-hypophosphite-monohydrate-99-pure-powder-10039-56-2-/264955292627>

I'll post how to safely make Lead hypophosphite. When you see the video - you'll agree you can do it.

Ingredient #3 (ground glass):

From a broken light bulb, broken beakers made of pyrex is the best 'glass'

Store brand online - this one is about \$20 and has been successfully tested:

<https://www.naturalpigments.com/clear-glass-powder.html>

or if you are a DIY kinda' guy

https://gunstreamer.com/watch/reloading-primers-how-to-grind-glass_gpp4vhh2n7R32jA.html

Ingredient #4 (ground gun powder or nitrocellulose).

The info is free and we encourage you to use and distribute it to all Patriots. I'd appreciate your help with Donations to help compensate me for my time. It's now a full-time job just answering my email/texts/phone.
